SUMMARY OF SKILLS

Enterprise Cloud Architecture & Governance: Google Cloud Platform (VPC, Shared VPC, Private Service Access, GKE, Cloud Run, Cloud DNS), AWS (Transit Gateway, RAM, AFT, EC2), Hybrid Cloud Landing Zones, High Availability & Cross-Platform Disaster Recovery.

Enterprise Generative AI & ML Systems: Retrieval-Augmented Generation (RAG), Gemini Enterprise Integration, Multi-Agent AI Frameworks, Contact Center AI (CCAI), Intelligent Log Ingestion

DevOps, IaC & Automation: Terraform, Terragrunt, Ansible Automation Platform, GitHub Actions, GitLab CI/CD, TeamCity, AWS Step Functions, Linux/Cron Scripting, ServiceNow & Jira API Integrations.

Cloud Security & Governance: IAM & Identity Centre, HashiCorp Vault (Dynamic Credential Rotation), Palo Alto Networks Integration, KMS Licensing, Azure Active Directory, SOC 1 / SOC 2 Compliance, Risk Control Matrices (RCM).

Programming & Frameworks: Python (Flask), Java (Spring Boot), GoLang (Terraform Testing), YAML, SQL.

AWARDS & CERTIFICATIONS

- | | |
|--|------------|
| • Google Cloud Certified Generative AI Leader | Feb 2026 |
| • Bell Excellence and Innovation Award | Feb 2025 |
| • GCP Associate Cloud Engineer (GCP ACE) | Jan 2025 |
| • HashiCorp Terraform Associate Certified (HCTA0-003) | Jan 2024 |
| • AWS Certified Cloud Practitioner (AWS CCP) | May 2023 |
| • GSA (Concordia University) Academic Excellence Award | April 2022 |

WORK EXPERIENCE

Google Cloud Platform Admin, ATCO Ltd., Alberta, CA

April 2025 - Present (Full Time)

- Built and deployed a RAG-based search agent for atco.com, improving search accuracy and unstructured data retrieval across public-facing websites
- Developed an AI agent system for RFP proposals, integrating a custom Python web app with LLM backends to reduce the time needed to draft enterprise proposals by 75%
- Created a personal productivity Gemini Enterprise app and rolled it out company-wide, enabling secure API connections to Outlook, SharePoint, and OneDrive for 150 active users in the first month, giving users an alternate option to Microsoft CoPilot
- Engineered an automated, cross-vendor log ingestion and ML analysis pipeline utilizing BindPlane and Gemini Enterprise to monitor 50+ End-of-Life (EOL) Windows Server 2008 assets; bypassed Dynatrace limitations to automate incident creation in ServiceNow and reduce mean time to detect (MTTD) critical infrastructure errors
- Designed a highly resilient, cross-platform Disaster Recovery (DR) architecture, utilizing Google Workspace as an automated failover system for Microsoft 365 to handle severe communication outages for 400 critical users
- Fixed critical routing and bottleneck issues between GCP VPCs and Palo Alto networks, restoring broken Windows KMS licensing and Domain Controller syncing
- Optimized cost efficiency by leading a GCP resource cleanup initiative, decommissioning stale resources, migrating applications, and updating billing structures, resulting in \$15K CAD annual savings in the first year
- Built serverless automations with Power Automate, Cloud Run, and Pub/Sub to send operational alerts to MS

Teams, cutting manual monitoring time by 40+ hours/month

- Collaborated with the ServiceNow team to build automated workflows for GCP user onboarding and VM provisioning, reducing administrative overhead by atleast 10 hours per request
- Managed monthly security patching cycles for all Windows and Linux servers while coordinating downtime windows across multiple business units, maintaining a 100% compliance posture

Cloud Automation Engineer, Bell Canada Inc., Alberta, CA

December 2022 – April 2025 (Full Time)

- Built a hub-and-spoke landing zone reference architecture in both AWS and GCP alongside Enterprise Architects, cutting environment delivery times by 50%
- Implemented HashiCorp Vault dynamic credential rotation across the hybrid cloud environment, eliminating static service account keys to improve IaC pipeline security
- Collaborated with the central tools team and restructured CI CD pipelines, decreasing existing pipeline execution times by 400%
- Leveraged AWS State Machines, Step Functions, Lambdas and CloudFormation to create SAM applications, promoting serverless deployment of applications on AWS using TeamCity and eliminating legacy code by 100%
- Developed multiple backend services on the Cloud Self-Serve portal utilizing Ansible, Python, and Terraform optimizing the usage of Cloud Infrastructure Landing Zones and improving operational processes
- Managed environment operations and database tables in an AWS RDS MySQL instance
- Created an automated Change Management process using Jira API, Python, and Ansible, for GCP and AWS deployments reducing manual operations by at least 50 mins per week per developer
- Managed user access controls via Azure Active Directory for the Bell Entry Access Point

Cloud Engineer, Nakisa Inc., Montreal, CA

May 2022 – December 2022 (Internship)

- Configured and deployed multiple micro-services using Java Spring Boot while restructuring application health dashboards in Prometheus & Grafana
- Built TCP Port Scanner feature for scanning the port status of over 100+ customer accounts, helping the company's admin dashboard to get a summary of open and closed network ports in Nakisa's dev environment
- Automated deletion of revoked connector instances from AWS DB by scripting 4 Linux CRON jobs and using the REST API, eliminating manual intervention of deleting these instances from the admin dashboard, resulting in an 80% reduction in manual efforts
- Addressed Apache Kafka and Kubernetes (cluster nodes) message queue issues by identifying potential ACL, SSL Handshake, and runtime exceptions and failures, alerting the R&D team before the issue is raised in production

Technical Analyst, Ernst & Young, India

Sept 2020 – Feb 2021 (Full Time)

- Involved in designing and executing tests of key IT controls for conducting Service Organization Controls (SOC1 & SOC 2)
- Testing of IT general controls and application controls, Information produced by the entity testing as a part of Financial Audit IT Integration (FAIT)
- Performing assessments of application controls and IT general controls such as access control, change management, operations, disaster recovery, and job scheduling
- Responsible for formulating Risk Control Matrices, testing Design and Operating Effectiveness of Controls, Risk Analysis and Remediation Plans

EDUCATION

Master of Applied Computer Science Concordia University, Montreal, CA

GPA: 3.75/4.00

Bachelor in Information Technology Guru Gobind Singh Indraprastha University, Delhi, IN

GPA: 8.65/10
